High tech companies told us what skills are needed in an advanced technology workplace. Now you can gain those specialized skills; learn to use SOP's, deal with OSHA, and become an important asset to a high tech company. This newly developed course covers four main areas of working in an advanced technology environment:

- **Process Control**
- **Safety and Security**
- **Legal and Ethical Issues**
- **Essential Math and Science skills**

This course is based on the current needs of high tech industries in Michigan. It is taught by a team of faculty with extensive experience in advanced technology. Students in Tech Careers, LCC Science Department Applied Degree programs and other disciplines will find this to be indispensable preparation for employment in the new Michigan economy.

Advance your career by taking
The Advanced Technology Workplace.
