LCC to offer one-of-a-kind program to ex-military medics
“Military Medic to Paramedic” plan will accelerate path to licensed paramedic and nursing degrees

LANSING – Lansing Community College – after two years of planning – is set to launch a unique medical program that will give a well-earned boost to men and women who served as military medics. Previously denied classroom credit for their prior medical training, this special group of veterans will now be credited for their efforts as they pursue civilian medical certification and licensure. The program, dubbed “Medic to Paramedic,” will welcome its first group of students in January.

The initial class is expected to include 10-12 students who served as medics before being honorably discharged from the U. S. military. The goal is to expand the program to support future classes of 24-36 former medics – referred to by military personnel simply as “docs”- so they can use their life-saving skills and rigid training to become licensed paramedics and registered nurses.

“We’re excited about this program and have been attending military veterans job fairs to line up potential participants,” said Darrell DeMartino, coordinator for the program and a paramedic with two decades of front-line experience providing care to patients.

“To the best of our knowledge, this program at Lansing Community College will be a pioneering effort, unlike anything being done nationally by any college.”

DeMartino explained that the program has received a $190,000 federal grant to help offset the costs of drafting a tailor-made curriculum and to fund the first class. The hope and goal is to continue the novel program after the pilot class has concluded. The veterans will be able to use their GI Benefits to pay for their studies.

The program is a win-win. Society benefits by having experienced medical personnel available to respond to medical emergencies, and it serves as a way of saying ‘Thank you!’ to the combat
medics who routinely set aside concerns for their own safety and put themselves squarely in harm’s way on distant battlefields to aid their fallen comrades.

The veterans, some of whom served eight years or more in the service, bring with them a level of maturity and a host of special qualities. “They’ve had to respond to medical situations generally not seen in civilian life such as wounds from biologic weapons – you don’t see those in downtown Lansing,” DeMartino said.

Medics also serve an important role during peacetime by tending to routine injuries and commonplace problems such as colds and the flu. They administer inoculations and perform routine physical checkups.

Their military medical work has introduced them to diverse populations, customs and cultures. “They’ve developed an exemplary work ethic and a seriousness of purpose that should carry over into their studies at LCC; they can serve as role models for their fellow students,” DeMartino said.

Details are still being finalized between LCC and State of Michigan EMS officials, but here’s how the program is shaping up:

Combat medics will get nine to 11 credit hours toward their paramedic certificate (they currently receive limited or no classroom credits for their intensive training and medical services performed in the military). This should allow them to cut a quarter or more off the classroom instruction time, so they will need to attend about 750 hours of class time instead of the traditional 1,000 to 1,100 hours.

Those who complete their paramedic training and pass the state’s paramedic licensure exam will be eligible to enroll in the college’s Advanced Standing Nursing track, allowing them to also earn an associate’s degree and be prepared for the nursing licensure exam.

**About Lansing Community College**

*Lansing Community College is Michigan’s third largest community college with more than 20,000 students attending each year. LCC offers courses in general education for those interested in transferring to a four-year institution, career and workforce development, developmental education and personal enrichment. To meet the professional development and training needs of regional employees, the college offers customized programs for credit, non-credit and continuing education. The University Center at LCC offers students the opportunity to earn bachelor’s and master’s degrees from six partner universities on the downtown LCC campus. For more information, visit lcc.edu.*
